Decode Low Latency 4K UHD, HD and HDR Streams for Broadcast Quality Video

Low latency video decoding for live sports coverage, news broadcasts, corporate video, and mission-critical ISR deployments.

4K UHD / Quad HD Video Decoding The Haivision Makito X4 Decoder is a highly versatile real-time HEVC/H.265 and AVC/H.264 video decoder that can receive up to four 1080p50/60 HD streams or a single full 2160p50/60 4K UHD stream over IP, along with 32 channels of digital audio. Video streams with either 8- or 10-bit pixel depths and 4:2:0 or 4:2:2 chroma subsampling can be decoded by the Makito X4 Decoder and output as 12G-SDI video for 4K content or in HD with up to four 3G-SDI outputs.

Ultra Low Latency End-to-End A perfect companion to the Makito X4 Encoder, the Makito X4 Decoder can decode HEVC and H.264 video with extremely low latency and is ideally suited for live broadcast interviews and remote production.

High Dynamic Range In addition to SDR, 10-bit pixel depths, and wide color gamut support (WCG), the Makito X4 Decoder can also automatically decode live content for HDR workflows using HLG or PQ (ST 2084) transfer functions.

Remote Production with Stream Sync Makito X4 Decoders support Haivision's Stream Sync technology which automatically synchronizes multiple streams based on timecode embedded by Makito X4 Encoders. Stream Sync supports remote production of live video over IP, as a cost-effective alternative to satellite and dedicated fiber, by enabling synchronized switching between multiple video & audio sources and is a cost-effective alternative to deploying large teams of personnel & resources at remote event locations.

High Density Form Factor Available as a compact standalone appliance or as a blade for Haivision rack-mountable enclosures, the Makito X4 Decoder offers the highest density available for up to 84 HD or 21 UHD video channels within a single 4RU rack module.

Secure Reliable Transport The Makito X4 Decoder can decode video streams secured with AES 128- or 256-bit encryption using the SRT protocol, which is critical when sharing valuable content over the internet. In order to reliably deliver streams over unmanaged networks, SRT can adapt to changing network conditions and recover lost packets in real-time. As part of a secure end-to-end video workflow, SRT is available within all Haivision products including the Makito X4 Decoder.

FEATURES	BENEFITS
Ultra-Low Latency	Extremely low latency decoding enabling interactivity for live bi-directional interviews and field contribution
4K UHD/Quad HD Video Decoding	Efficient real-time HEVC/H.264 video decoding up to 3840x2160p60 with 4:2:2 10-bit color for impeccable picture quality including in HDR
Stream Sync for Remote Production	Ensure seamless live production by maintaining synchronization when switching between multiple video and audio sources
High-Density Form Factor	Compact appliance or blade module for scalable deployment in constrained spaces and high-density environments
SRT Support for Secure and Reliable Transport	Receive live streams without packet loss over unpredictable networks and protect valuable video content by ensuring it is viewed by intended audiences only
